About me

As a freelance frontend developer I strive to make my products with an utmost care and the highest quality. Recently, to accomodate my customer's expectations I have created from scratch the karmoto.pl app and now am maintaining and providing new facilities for that web application. In the near future I would like to work on a big project in an experienced team so that I could improve my skills.

Projects

KarMoto - The application has been created for e-commerce in order to freely control the entered data. Web system allows a customer to view available products and contact a trader. The latter, on the other hand, has full control over all the data he introduced to the system.

<https://karmoto.pl>

ConsultingTime - This web application facilitates communication between a university professor and students. Simplifying process of consultations for students, which saves time and also reduces the risk of spreading COVID-19.
